Transcript:

I'm Tegan and I act acts as a personal tutor. Our website measures poverty for UNICEF. My name is Joanne and this app lets us use us and messages in augmented reality. We do a lot of app for NHS that tracks skin cancer. The software engineering project unit is an opportunity for students to take their individual programming experience and use it as part of a large-scale climate-led project. This unit really sets Bristol apart. It's something that not a lot of other universities offer and so it gives you those skills of going into a workplace. I think software engineering project is really important here for you. It teaches you how to work professionally and how to also interact with the clients in the outside world. I believe that this unit is really beneficial as a teacher's job, many employability skills that can be applicable to the real world. This project gives you something to put on your portfolio. It means you have an app you've developed something. The main thing that we're most pleased about is the fact that our work is definitely going to be used in the future as well as we can kind of see the way in which our results are being used currently. This is how it's going to be when you go and fork in industry, right? So it's a really important experience as a second-year student to learn how to like work with clients, how do work in the team. As part of our project, we were assigned a mentor. He would frequently check up on us to make sure everything was going okay. So this project has given us a lot more confidence going to the workplace as we've developed skills such as presenting to clients in a more professional manner. Software engineering is a really hard but really rewarding project and I loved it. Working on this project has developed my skills massively. The Software Engineering project is fun and exciting. The whole project was an enriching and inspiring experience.

Bullet Points:

- The software engineering project unit is an opportunity for students to take their individual programming experience and use it as part of a large-scale climate-led project.
- Software engineering is a really hard but really rewarding project and I loved it
- The Software Engineering project is fun and exciting
- The whole project was an enriching and inspiring experience.
